# IP/WAF Connector for IICE
WebSphere Information Integrator Content Edition

Power and Flexibility

Organizations that use CM/WAF on iSeries have long desired tool that will allow them federated access to their content client application. SYSCOM is proud to announce new iSeries CM/WAF Connector for IICE. Now, in one easy use browser window, workers can access content from all repositories, and leverage features such as Compound Search, Federated Search, and Document Copy between repositories.

All CM/WAF document retrieval features in a browser!

Federated Search

IICE renders all connected repositories as a single system. Enter search terms in one screen, and IICE will find matching documents in any connected Library.

Document Copy

The CM/WAF Connector for IICE provides users with the ability to copy documents from their CM/WAF repository to any other connected Library that supports the receiving of copied documents using IICE functions. You cannot copy into CM/WAF.

All your content. From any repository.
In a browser... Finally.

Prerequisites

In addition to the standard IICE requirements, CM for iSeries version 5.1 is required.

Integration Experts

For over 20 years, we've been integrating complex, large scale, high volume systems. We've worked with ImagePlus since pre-release code in 1989 and have deep relationships with the IBM development labs.
