

# AIS+EE™

Advanced Image Solution Plus Enterprise Edition

## A Whole New Look

SYSCOM's Advanced Image Solution Plus (AIS+) provides an alternative solution for a front-end application to ImagePlus. AIS+ combines the existing functionality of IBM's front end, Folder and Workflow Application (FWA) - with enhanced features for customers looking for a more comprehensive application.

### Requirements

- OS/390 2.10 or z/OS 1.1 or higher
- Transaction Server (CICS) 1.3 or higher
- DB2 6.1 or higher
- Content Manger ImagePlus 3.1 or higher (IPFAF and IODM)

## AIS+EE Workstation Client

Formerly known as FluxWorks, the AIS+ EE Workstation Client is an ActiveX toolkit that integrates with SYSCOM's AIS+ software. The communication to the Mainframe is accomplished via APPC over either SNA or TCP/IP networks. AIS+EE Workstation Client can be used on Windows 2000 or XP platforms.

AIS+EE Workstation Client provides these AIS+ functions:

- |                         |                          |
|-------------------------|--------------------------|
| Folder Update           | Folder List              |
| Folder Note List        | Document History         |
| Document Copy/Move      | Folder Note View         |
| Folder Note Add         | Folder Note Delete       |
| AIS+ Workflow Functions | Document List            |
| Document View           | Document Print           |
| Document Fax            | Document Delete/Undelete |

## AIS+ EE Web Client

The AIS+ EE Web Client is a thin-client application that allows Web browser access to ImagePlus objects. All communication is via TCP/IP. A compatible viewer is required as a plug-in to the Web browser. SYSCOM has a viewer available that supports all MO:DCA formats including overlays and TIFF. The JAVA servlet component requires the AIS+ EE Client Toolkit on the same system as ImagePlus to perform the look-ups and object retrievals. The look-up and retrieve process works for both FAF/FWA or AIS+ installations.

AISWeb is currently supported any platform that supports WebSphere V5 or V6 and that has TCPIP connectivity to the host ImagePlus system.
