## Confidentiality Statement

---

This document contains proprietary information and must therefore remain confidential among SYSCOM, Inc. and Customers who have executed the AIS+ software license agreement.

## Trademarks and Service Marks

---

The following terms used in this publication are registered trademarks or service marks of the IBM Corporation in the United States or other countries:

- **CICS**
- **DB2**
- **FAF**
- **IBM**
- **ISPF**
- **ImagePlus**
- **IODM**
- **OS/390**
- **TSO**
- **VTAM**

## Software Prerequisites for AIS+ EE Version 1.0

---

The following software components and release levels are required for AIS+:

- OS/390 2.8 or higher
- Transaction Server 1.3 or higher
- DB2 6.1 or higher
- Content Manager ImagePlus 3.1 or higher
- LE370 Environment

## Copyright

---

The entire contents of this manual are copyright 1995, 2001 by SYSCOM, Inc. All rights reserved.

## Product Abbreviations

---

The following is an approved abbreviation for the Syscom AIS+ Enterprise Edition product name used in this publication and the full product name to which the abbreviation refers:

**AIS+** Is an abbreviation for Syscom AIS+ Enterprise Edition

**AIS+ EE** Is an abbreviation for Syscom AIS+ Enterprise Edition

## Introduction

---

Welcome to SYSCOM's Advanced Image Solution+ Enterprise Edition (AIS+ EE), hereafter referred to as AIS+. This manual will guide you through the installation and verification of the AIS+ software.

AIS+ is an image utility application targeted for IBM ImagePlus Multiple Virtual Storage/Enterprise Systems Architecture (MVS/ESA) installations that require high-volume processing of commonly accessed data. AIS+ can be implemented enterprise-wide to support multiple applications by maintaining independence of databases, screen sets, and exit logic.

## Product Overview

---

AIS+ is a front-end folder and workflow utility for users of IBM ImagePlus MVS/ESA. It is built upon standard IBM ImagePlus MVS/ESA components, and it fully exploits the capabilities of IBM IPFAF. AIS+ provides folder, document, and work management functions via an easy-to-learn and productive user interface.

- **Folder and Document Management:** AIS+ provides flexible document capture and powerful retrieval capabilities. Multiple folder index values are available for wildcard searches. Folder contents can be presented to users in several ways. Notes regarding a folder can be added, retrieved, or deleted. In the event that folder and document maintenance is required, functions are provided to maximize user productivity. For example, a user can re-index a document, place a copy of one document in multiple folders, or even manipulate the page sequence within a document.
- **Workflow:** AIS+ allows a document to automatically be placed into a specified work queue, and subsequently checked out for work based on a prioritization scheme. Once an item has been worked, users can file it, route it for additional processing, or place it in a pend state. Related documents may be dynamically grouped by the system, so that they are always worked as a unit. A supervisory panel allows for online viewing of queue contents, and interactive reassignment of work.
- **Supervisory and administrative:** AIS+ provides a menu of options so that supervisors can add system users, selectively grant user access to AIS+ functions, define folder and document profiles, and add new queue and work type definitions. AIS+ dynamically generates panels based on user profiles, so that a user is presented with only those applications and functions they are authorized to perform.
- **User Interface:** AIS+ uses navigation methodology for both the experienced user (fast path commands) and the occasional user (menus, PFkeys, and screen options). AIS+ streamlines productivity by consolidating functions on core screens.
- **Additional features:** AIS+ can be readily integrated with IBM's FaxRouter/2 package for both inbound and outbound support. In addition SYSCOM's Fax Notify product may be seamlessly integrated in conjunction with FaxRouter/2 and AIS+. Batch utilities are provided to maintain workflow queues as well as produce statistical reports.
- **AIS+ Client:** (Thick Client)

- 
- **AIS+ Web:** AIS+ Web provides an intuitive and convenient web user interface to IBM Image Plus. This allows the user to search and view an image document through via Microsoft Internet Explorer or Netscape Navigator over the Internet without any needing application-specific software installed on the viewing computer. It is a secure application that requires user login authentication.

## Installation Process Overview

---

AIS+ is compatible with the IBM ImagePlus Folder Access Facility (IPFAF) Application Programming Interfaces (APIs) and their associated DB2 architecture, enabling AIS+ to be readily integrated with other ImagePlus components. Before installing AIS+, please have all of the appropriate software prerequisites in place and verify that they are functioning properly. This product is intended for an initial install or an upgrade from AIS+ Version 3.0 only. If your site is using a prior version of AIS+, you must upgrade to AIS+ Version 3.0 before continuing with this installation process. This manual is intended solely for the installation of AIS+ and is not a substitute nor replacement for material contained in the IBM product manuals. Please refer to the appropriate IBM manual for installation resolution or verification of any IBM software component.

**If you are performing an initial install of AIS+ EE Version 1.0 software, please follow the check list provided in Appendix C.**

**If you are upgrading the software from AIS+ Version 3.0 to AIS+ EE Version 1.0, please follow the check list provided in Appendix D.**

The installation process is comprised of the following five (5) steps:

1. Unload Software from the Tape
2. DB2 Administration
3. CICS Administration
4. Software Installation
5. Installation Verification

Appendix C contains a checklist for an initial install of AIS+ EE Version 1.0. And, Appendix D contains a checklist for an upgrade from AIS+ Version 3.0. Using the appropriate checklist may be very helpful for a successful install of AIS+.

## System Access Levels

---

Depending upon your site's policies and standards, one or more individuals may be required to install this product. The installation procedure is relatively simple and straightforward. If you are the one individual who is tasked to perform the installation, you must have the ability and authority at either the DB2 SYSADM (build everything) or DBADM (build all but the storage group) level. We will discuss this further in detail when installing the AIS+ database. You will also need the ability to add new IBM CICS PPT, PCT, and RCT table entries to the AIS+ targeted IBM CICS region. But foremost, you need access to IBM TSO to perform these functions.

## Unload Software from the Tape

The first file on the AIS+ tape contains the installation JCL job stream to unload the tape's files into the libraries you will target to eventually hold the AIS+ software. The sample JCL below should be coded and run to extract the first file into a PDS member capable of being edited.

```
//jobname JOB (accounting),'label',CLASS=?,
//          MSGCLASS=? ,NOTIFY=? ,REGION=?
//GENER EXEC PGM=IEBGENER
//SYSUT1 DD DSN=AISEE10.UNLOAD.JCL,
//          DISP=OLD,
//          LABEL=(1,SL),
//          UNIT=? ,
//          VOLSER=AISEE1,
//          DCB=(LRECL=80,RECFM=FB,BLKSIZE=3120)
//SYSUT2 DD DSN=? ,
//          DISP=? ,
//          SPACE=? ,
//          UNIT=? ,
//          DCB=(RECFM=? ,LRECL=? ,BLKSIZE=? )
//SYSIN DD DUMMY
//
```

The installation JCL stream should now be in a position to be modified. As you will see, the stream is a lengthy, yet simple set of PROCs. A listing of the installation JCL can be found in “Appendix A: Installation JCL - Tape Unload JCL”.

THE AISLOAD JCL stream will load all members into their correct location after allocating the following datasets:

- An Installation library named *AISEE10.INSTLIB* with the following characteristics:  
DCB=(DSORG=PO,RECFM=FB,LRECL=80,BLKSIZE=3120)  
SPACE=(3120,(250,250,30),,,ROUND)
- A Copybook library named *AISEE10.CPYLIB* with the following characteristics:  
DCB=(DSORG=PO,RECFM=FB,LRECL=80,BLKSIZE=3120)  
SPACE=(3120,(500,250,60),,,ROUND)
- A Source library named *AISEE10.SRCLIB* with the following characteristics:  
DCB=(DSORG=PO,RECFM=FB,LRECL=80,BLKSIZE=3120)  
SPACE=(3120,(500,250,60),,,ROUND)
- A Job Control Language library named *AISEE10.JCLLIB* with the following characteristics:  
DCB=(DSORG=PO,RECFM=FB,LRECL=80,BLKSIZE=3120)  
SPACE=(3120,(250,250,07),,,ROUND)
- A BMS Map Source library named *AISEE10.BMSLIB* with the following characteristics:  
DCB=(DSORG=PO,RECFM=FB,LRECL=80,BLKSIZE=3120)  
SPACE=(3120,(750,250,30),,,ROUND)
- A DBRM library named *AISEE10.DBRMLIB* with the following characteristics:  
DCB=(DSORG=PO,RECFM=FB,LRECL=80,BLKSIZE=3120)  
SPACE=(3120,(500,250,50),,,ROUND)
- A Object library named *AISEE10.OBJLIB* with the following characteristics:  
DCB=(DSORG=PO,RECFM=FB,LRECL=80,BLKSIZE=6160)

SPACE=(6160,(1500,250,80),,,ROUND)

Please review the JCL and make any modifications necessary to conform to your site's naming conventions and standards. The bolded "**AISSEE10**" above is defaulted in the JCL and should be modified to conform to your sites high-level qualifier standards. If your site does not permit this form of dataset allocation, you will have to modify the 'DD' statements and space parameters accordingly.

After all of the modifications are completed, submit the AISLOAD job and verify that each step completes with a condition code of zero (0). If a condition code other than zero is encountered, correct the problem and rerun the job. If you are building the PDSs within the job, delete and uncatalog them first, otherwise you may experience additional JCL errors upon the next execution.

## DB2 Administration

---

This section assumes that the FAF API database has been fully installed. The FAF API database structure allows for multiple tablespaces for some of the larger tables. Refer to the [IBM SAA ImagePlus Folder Application Facility MVS/ESA Application Programming Interface System Programmer's Guide](#) for a more detailed explanation of tablespets. When installing FAF and AIS+, there are three options available to assure that AIS+ takes advantage of these tablespets.

- (1) Create all tablespets for the FAF API tables. For the tablespets that will not be used, you should set them up with minimal space. This is the suggested option because it only requires altering the space on the tables and indices within the tableset when creating an application with a new tableset. An additional advantage is dropping and creating synonyms or rebinding any plans will not be necessary.
- (2) Create only the tablespets that you will be using and create synonyms for the other tablespets. This option is best if you cannot spare the minimum space required to create all the tablespets. Unfortunately, the synonyms must point to existing tables. Therefore, there is a risk of someone setting up a test application pointing to an assumed test tableset that is really a production tableset.
- (3) Create only the tablespets that you will be using and specify VALIDATE(RUN) in all the binds. This option will cause all DB2 validations to occur at run time, instead of bind time, which will detrimentally affect performance.

### DB2 Requirements for an Initial Install

#### Modify Install JCL

There are eleven (11) jobs that need to be executed to perform an intital install of the AIS+ database architecture. All of these jobs, which are located in the install library, need to be modified to conform to the site's job card requirements and point to the appropriate DBRM, DB2, system and application libraries. In addition, the space and bufferpool assignments must be modified to meet your application's requirements. To further aid you with the size calculations, refer to the size table in Appendix B of this manual.

Appendix C lists all of the jobs and their functions for an intial install of AIS+ EE Version 1.0. These jobs are not designed to run parallel and must run in the sequence presented on the check list.

#### Run Install JCL

After all of the modifications are completed, submit each job and verify that each step completes with a condition code of zero. You should also walk through the output to verify that all DB2 components were built correctly. Potential non-zero CCs will appear if you are not authorized to perform all of the functions within the job stream, have rerun the job without first deleting the previously established database contents, or your supplied parameters are not permissible for your site's standards.

Upon successful completion of this phase, you may proceed with the installation of the IBM CICS components for AIS+.

## DB2 Requirements for an Upgrade from AIS+ Version 3.0

### Modify Upgrade JCL

There are four (4) jobs that need to be executed to perform an upgrade of the AIS+ database architecture. All of these jobs, which are located in the install library, need to be modified to conform to the site's job card requirements and point to the appropriate DBRM, DB2, system and application libraries.

Appendix D lists all of the jobs and their functions for an upgrade to AIS+ EE Version 1.0.. These jobs are not designed to run parallel and must run in the sequence presented on the check list.

### Run Upgrade JCL

After all of the modifications are completed, submit each job and verify that each step completes with a condition code of zero. You should also walk through the output to verify that all DB2 components were built correctly. Potential non-zero CCs will appear if you are not authorized to perform all of the functions within the job stream, have rerun the job without first deleting the previously established database contents, or your supplied parameters are not permissible for your site's standards.

Upon successful completion of this phase, you may proceed with the installation of the IBM CICS components for AIS+.

## CICS Administration

---

The AIS+ installation tape contains sample data you will load into your CICS control tables where you will run AIS+. The installation library contains three members with CICS definitions, AISRCT, AIS3UCSD, and AISLDCSD. You will use only two of these depending upon your installation needs.

### CICS Requirements for an Initial Install

Sample JCL, AISLDCSD, is provided in the installation JCL library to load CICS definitions, (includes all PPT and PCT entries for AIS+ EE Version 1.0). Modify this member to meet your site's standards before you run the JCL. Run your modified JCL to update the CICS System Definition file (CSD) used in the CICS region where AIS+ EE will reside.

The RCT member, AISRCT, should be included in your normal RCT stream and reassembled to include the entires required for AIS+ EE Version 1.0

Include the AIS+ CICS load library in your CICS startup deck.

### CICS Requirements for an Upgrade from AIS+ Version 3.0

Sample JCL, AIS3UCSD, is provided in the installation JCL library to load CICS definitions, (includes new PPT and PCT entries to upgrade to AIS+ EE Version 1.0). Modify this member to meet your site's standards before you run the JCL. Run your modified JCL to update the CICS System Definition file (CSD) used in the CICS region where AIS+ EE will reside.

The RCT member, AIS3URCT, should be included in your normal RCT stream and reassembled to include the entires required for AIS+ EE Version 1.0

Include the AIS+ CICS load library in your CICS startup deck.

# Software Installation

---

## Modify the Included JCL

AIS+EE Version 1.0 software delivery is by object members instead of source modules so there is no need to compile all modules within the system. This decreases the total amount of time required to install AIS+, as well as assure that all customers are on the appropriate level of software. Sample JCL is located in the install library (LINKCICS, LINKBTCH, and LINKMAP) to linkedit these members into your AIS+ load libraries. Modify the members to conform to your site's JCL standards, including job card requirements and references to the appropriate system and application libraries. The sample JCL members are listed in Appendix A of this manual.

Source is still provided for customization of the BMS maps, the customer exits, and the batch reports. Sample compile and assembly JCL members located in the install library (AISMPC, AISCICS, and AISBATCH) can be used to compile and assemble any members that are customized. Modify the members to conform to your site's JCL standards, including job card requirements and references to the appropriate CICS, DB2, system, and application libraries.

## Module Assembly

- Make sure that any modifications to the panels are complete. See *Appendix E: Customization Standards; Basic Rules for Customizing Maps of the AIS+ System Administration Manual* for guidelines on customizing the BMS source.
- Submit the AISMAP JCL job stream to assemble each of the BMS maps that have been changed. Refer to *Appendix F: Program List; BMS Source* of this manual for a list of the BMS maps. If you will be using multiple maps, assure that each additional map is included in this list.
- Verify that each of the AISMAP JCL job streams submitted complete with condition codes of less than eight (8) and that any warnings issued are informational only.

## Module Compilation

- If user exits will be used, either modify the source stub members (AIEX0xxP) provided or create copies of the members (adhering to the naming standards in *Appendix E: Customization Standards of the AIS+ System Administration Manual*).
- Submit the AISCICS JCL job stream to compile any customized exit members. This member contains a step for DB2 precompiling, so if the user exits have DB2 access, use this job for them as well. If the user exits do not have DB2 access, make a copy of this JCL member, remove the DB2 recompile step, and submit for each of the non-DB2 exits.
- Submit the AISBATCH JCL job stream for each of the batch reporting jobs that have been customized.

## Module Linkedit

- Assure that all maps, online object modules and batch object modules have been successfully unloaded from the installation tape. Refer to Appendix F of this manual for a list of modules.
- Run jobs LINKMAP, LINKBTCH, and LINKCICS located in the install library. These jobs will link all modules and maps in the AIS+ system. Make sure that the

JCL streams have been modified prior to running them to conform to your site standards. Please note, LINKMAP must run prior to other members since there are subroutines linked which are needed for LINKBTCH and LINKCICS.

## Bind DB2 Plans

- Update member PACKAUTH in the install library to adhere to your shop standards. Use DB2 interactive SPUFI to run member PACKAUTH. This member will set up a package collection and grant authority to the packages in this collection.
- Update member BINDCICS in the install library to include any exits that call DB2. Refer to *Appendix B: CICS User Exit/Program List* in the [AIS+ System Administration Manual](#) for more information about which transactions call the user exits.
- Submit the BINDCICS JCL job stream to bind the online DB2 plans and grant authority to execute the plans. Verify that each plan returns a 'successful bind' message and that the job completes with a condition code of zero (0). If not, the job may be rerun from the start.
- Update and submit the BINDBTCH JCL job stream to bind the batch DB2 plans. Verify that each step completes with a condition code of zero (0). If not, the job may be rerun from the start.

## Grant DB2 Plans

- Run JCL member AISGRANT found in the installation library. This JCL job stream will grant access to all plans in the AIS+ system. Assure that the member has been updated prior to execution to follow your shop's naming standards.

## Install Verification

---

This section will acclimate you to AIS+ while verifying the following administrative and end-user functions:

- Adding an application
- Adding a folder profile
- Adding a form profile
- Adding a document
- Displaying a document

For detailed instructions about performing these functions, see the [AIS+ User Reference Manual](#). For additional information on setting up an application, please refer to the [AIS+ System Administration Manual](#).

**NOTE:** The functions must be performed in the order described.

### Adding An Application

- 1) Sign on to IBM CICS.
- 2) Press the Clear key to clear the screen.
- 3) Enter SA09 on the blank screen. The Application Profile 1 screen will be presented.

**Note:** In AIS+ EE Version 1.0, the SA09 screen has been modified to show two application identifiers. These are the FAF Application **CODE** which is a unique two byte numeric value ,(00 through 99) , and the AIS Application **ID** which is a unique two byte character value. If the application code is omitted when creating a new application, AIS will generate the next lowest application code value. Both of the application code and ID are required when adding an application. A list of available numeric application codes is also displayed when adding a new application to aid entering a unique unused application code.

- 4) Enter the following data:
  - Type 00 in the APPLICATION CODE field.  
**Note:** If application code is not entered, AIS will generate the next lowest value.
  - Type ZZ in the APPLICATION ID field.
  - Type 0 (zero) in the TABLESET field.
  - Type IVP TEST APPLICATION in the DESCRIPTION field.
  - Type a valid IBM IODM system identifier for your installation in the APPLICATION CREATE SITE field.
  - Type a valid collection name in the COLLECTION NAME field.
  - Type 1 in the DATE FORMAT field.
  - Type 2 in the TIME DISPLAY field.
  - Type 2 in the TIME ENTRY FORMAT field.
  - Type 1 in the DOCUMENT LIST FORMAT field.
  - Type R in the FOLDER TAB LIST FORMAT field.
  - Type 20 in the NUMBER OF WORK ITEMS field.
  - Type P in the SORT WORK ITEMS field.

- Type MASTER in the SYSTEM ADMINISTRATOR ID field.
  - Type MASTER in the SYSTEM ADMINISTRATOR PW field.
  - Type 3 in the TEMP ID TYPE field.
  - Do not enter a value in the TEMP ID PREFIX field.
  - Retain Y in the FOLDER TYPE PREFIX field.
  - Retain L in the COPY IND field
  - Retain L in the DELETE IND field
  - Type 060 in the MAX DAYS field.
  - Do not enter a value in the FUTR DAYS field.
  - Type P in the EXIT NAME SUFFIX field.
  - Type M in the MAP NAME SUFFIX field.
  - Type 950 in the MAXIMUM PRIORITY field.
  - Do not complete any of the other fields. The system defaults will be used.
- 5) Press the PF5 key to add the application. The following message will display:
    - "AIS0095 APPLICATION PROFILE UPDATED"
  - 6) Press the Clear key to clear the screen.

## Verifying AIS+ Tables

- 1) Update the INSTRAN member to change the application Code to zero (0) , the application code for the application ZZ. The application ID code is the very first number in the insert row. Submit the INSTRAN member through spufi. The INSTRAN member is located in the INSTALL library. (Note: This member must be used for each new application created in AIS+ to ensure the usability of the new application)
- 2) Update the INSDRSN member to change the application ID code to zero (0) , the application ID code for the application ZZ. The application ID code is the very first number in the insert row. Submit the INSDRSN member through spufi. The INSDRSN member is located in the INSTALL library. (Note: This member must be used for each new application created in AIS+ to ensure the usability of the new application)

## Signing On to AIS+

- 1) Enter the following on a native IBM CICS screen: The AIS+ Main Menu will be displayed.
  - SO01/MASTER/MASTER/Y/ZZ press <ENTER>
- 2) Enter SA in the Select Option field on the Main Menu and press <ENTER>. The AIS+ System Administration Menu will be displayed.

## Adding a Folder Profile

- 1) Enter FD in the Select Option field, F1 in the Folder Type field and press <ENTER>. The FOLDER ADMINISTRATION PROFILE screen will display with the following message:
  - "AIS0043 THE FOLDER TYPE IN QUESTION DOES NOT EXIST".
- 2) Press the PF5 key to place the screen in add/update mode.

- 3) Enter the following data:
  - Type 99 in the SECURITY LVL field.
  - Type 03 in the WILDCARD SEARCH MIN field.
  - Type IVP TEST FOLDER in the DESCRIPTION field.
  - Type PRIME in the PRIMARY LABEL field.
  - Type 10 in the PRIMARY LENGTH field.
  - Type SEC1 LABEL in the SECONDARY 1 LABEL field.
  - Type 05 in the SECONDARY 1 LENGTH field.
  - Type 02 in the SECONDARY 1 SEARCH field.
  - Retain N in the DELETE EMPTY FOLDER field.
  - Type 01 in the tab NO field (1).
  - Type TAB01 in the tab DESCRIPTION field (1).
  - Type 02 in the tab NO field (2).
  - Type TAB02 in the tab DESCRIPTION field (2).
- 4) Press the PF5 key to add the folder profile. The following message will display:
  - "AIS0055 THE FOLDER PROFILE HAS BEEN ADDED".
- 5) Press the PF3 key to return to the System Administration Menu.

### **Adding a Form Profile**

- 1) Enter FP in the Select Option field, FORM-1 in the Form Name and press <ENTER>. The FORM PROFILE screen will display with the following message:
  - "AIS0073 REQUESTED FORM NAME DOES NOT EXIST".
- 2) Press the PF5 key to place the screen in add/update mode.
- 3) Enter the following data:
  - Type IVP FORM NAME1 in the DESCRIPTION field.
  - Type Y in the INDEX field.
  - Type Y in the FUTR DATE field.
  - Type 99 in the SECURITY LEVEL field.
  - Type DATE LBL in the DOCUMENT DATE LABEL field.
  - Type N in the RETAIN PAPER field.
  - Type F1 in the FOLDER TYPE field.
  - Type TAB01 in the TAB DESCRIPTION field.
- 4) Press the PF5 key to add the form profile. The following message will display:
  - "AIS0075 THE DOCUMENT PROFILE WAS SUCCESSFULLY ADDED".
- 5) Press the PF3 key to return to the System Administration Menu.
- 6) Press the PF3 key again to return to the AIS+ Main Menu.

### **Adding a Document**

- 1) Enter IS in the Select Option field, F1 in the Folder Type and press <ENTER>. The Document Index and Scan screen will display with the following message:
  - "AIS0126 PRIMARY KEY MUST BE ENTERED".
- 2) Enter the following data:
  - Type IVPTEST01 in the PRIME field.

- Type FORM-1 in the FORM NAME field.
- 3) Press the ENTER key.
  - 4) Default values will appear in DOCUMENT DESCRIPTION, TAB, DATE LBL, RETAIN PAPER and the ROUTE flag.
  - 5) Press the PF5 key. The following message will display:
    - "AIS0084 TEMPID HAS BEEN GENERATED. BEGIN NEXT INDEX."
  - 6) The screen will be redisplayed with a temporary ID value. The TEMPID is created based upon the TEMP ID TYPE entered in the application profile. The sample data uses type equal 3, which generates a six digit random number. Write down the temporary ID. After you add the document, you must scan it into the IBM ImagePlus system using the temporary ID. For instructions about scanning the document, refer to the appropriate IBM product manual.
  - 7) Press PF3 to return to the AIS+ Main Menu.

## Displaying a Document

You cannot perform this function until the document is successfully scanned and stored.

- 1) From the AIS+ Main Menu, enter DL in the Select Option field, F1 in the Folder Type, IVPTEST01 in the FOLDER KEY and press <ENTER>. The DOCUMENT LIST screen will be displayed. Only one document exists in the folder so you do not need to complete any of the other search fields.
- 2) Type V in the OPT field (view document) and press <ENTER>. The document you selected will be sent to your workstation.

## Signing Off

- 1) Press the CLEAR key to clear the screen.
- 2) Type AOFF on the blank screen and press <ENTER>. The message "OPERATOR HAS SIGNED OFF AIS+ SYSTEM" appears.
- 3) Press the Clear key to clear the screen.
- 4) Sign off IBM CICS.

This is by no means a comprehensive test of AIS+, but it is enough to test the basic functions of AIS+ (i.e. adding profiles, folders and documents). If you would like to investigate further, use the [AIS+ User Reference Manual](#) as a guide and walk through those options we did not cover and review their results.

## Appendix A: Installation JCL

---

### Tape Unload JCL

Use the following sample JCL to unload the tape files. This JCL is provided in data set AISEE10.UNLOAD.JCL, (see section “Unload Software from the Tape” for details). You may need to customized the JCL to match your site's standards.

```

//AISLOAD JOB (ACCOUNTING),NAME,
//      CLASS=?,
//      MSGCLASS=?,
//      MSGLEVEL=(1,1),
//      NOTIFY=???????
//*
//*****1. MODIFY THE JOBCARD
//** 2. CHANGE THE FOLLOWING SEVEN (7) NEW PARTITIONED DATA SET NAMES
//** TO MATCH YOUR SITE STANDARDS.
//**      1. AISEE10.INSTLIB
//**      2. AISEE10.CPYLIB
//**      3. AISEE10.SRCLIB
//**      4. AISEE10.JCLLIB
//**      5. AISEE10.BMSLIB
//**      6. AISEE10.DBRLIB
//**      7. AISEE10.OBJLIB
//** THE ABOVE DATASET NAMES ARE ASSIGNED TO DISKLIB AND CAN
//** BE CHANGED ACCORDING TO YOUR SITE STANDARDS.
//** 3. CHANGE ?TAPE? TO YOUR SITE SPECIFICATIONS.
//** 4. CHANGE ?VOLSER? TO YOUR SITE SPECIFICATIONS.
//** 5. SPACE IS ALLOCATED IN BLOCKS USING BLKSIZE. REQUIREMENTS
//** IN CYL/TRK ARE LISTED BY EACH LIBRARIES SPACE SYMBOLICS
//** 6. JOB IS RESTARTABLE IN ANY STEP
//*****
//** UNLOAD THE PDS MEMBERS THAT CONTAIN AIS+ MODULES *
//*****
//INSTLIBS PROC TAPE=?TAPE?,

```

## DB2 Initial Install Jobs

Use the following sets of JCL to build the storage group, the database, the various tables, indices and views. The JCL is provided in data set AISEE10.INSTLIB.

### AISALDET

This member will alter the FAF/API Work Detail Table (EYPTWDET) for AIS+ EE Version 1.0.

```
//AISALTER JOB (ACCOUNT), 'ALTER FAF TABLES', MSGCLASS=X, CLASS=A,
//                  MSGLEVEL=(1,1), NOTIFY=&SYSUID
//ROUTE PRINT LOCAL
//*
//*****
//*
//*
//*
//** Job to alter the FAF/API work detail table (EYPTWDET)
//*
//*****
//*
//** CUSTOMIZE THE FOLLOWING FIELDS:
//*
//*   DB2LOAD    - HIGH LEVEL QUALIFIER OF DB2 SYSTEM LIBRARY
//*   DB2SYS     - DB2 SUBSYSTEM
//*   DB2PLAN    - DB2 PLAN NAME
//*   DB2RUN     - HIGH LEVEL QUALIFIER OF DB2 RUNTIME LIBRARY
//*   CREATOR    - ID OF CREATOR DEFINING THE TABLE
//*
//*****
//*
//JOBLIB      DD DSN=?DB2LOAD?.SDSNLOAD,DISP=SHR
//EYPALTER    EXEC PGM=IKJEFT01,DYNAMNBR=10,REGION=1024K
//SYSPRINT    DD SYSOUT=*
//SYSTSPRT    DD SYSOUT=*
//SYSTSIN     DD *
   DSN SYSTEM(?DB2SYS?)
   RUN PROG(DSNTIAD) PLAN(?DB2PLAN?) -
      LIB('?DB2RUN?')
   END
/*
//SYSIN DD *

ALTER TABLE ?CREATOR?.EYPTWDET
   ADD PREVEMP CHAR(8) NOT NULL WITH DEFAULT;

ALTER TABLE ?CREATOR?.EYPTWDET

/*
//
```

## AISFAFIX

This member will define additional indices on FAF/API tables.

```

//AISFAFIX JOB (ACCOUNT),'Create WDET index',MSGCLASS=X,CLASS=A,
//                  MSGLEVEL=(1,1),NOTIFY=&SYSUID
//ROUTE PRINT LOCAL
//*
//***** ****
//*
//*
//**          AISFAFIX
//*
//** Sample job to define additional indices on FAF/API tables.
//** Note that #1 below required, but #2 & #3 are optional.
//**
//** 1. FAF/API work detail table (EYPTWDET)
//** 2. FAF/API object table      (EYPTOBJTx)  (Where xx=tableset)
//** 3. FAF/API event   table    (EYPTEVNTxx)  (Where xx=tableset)
//**
//***** ****
//*
//** ATTN!!!
//** - Adjust space parameters before running this job.
//** - Job is setup for a single object and event tableset table.
//** Duplicate the lines to create indices for all applicable
//** tablesets used at your installation.
//*
//** CUSTOMIZE THE FOLLOWING FIELDS:
//** DB2LOAD  - HIGH LEVEL QUALIFIER OF DB2 SYSTEM LIBRARY
//** DB2SYS   - DB2 SUBSYSTEM
//** DB2PLAN  - DB2 PLAN NAME
//** DB2RUN   - HIGH LEVEL QUALIFIER OF DB2 RUNTIME LIBRARY
//** CREATOR  - ID OF CREATOR DEFINING THE TABLE
//** AISTSAP  - TABLE SPACE NAME
//** AISDB31  - DATABASE NAME
//** AISGRPIX - INDEX STORAGE GROUP NAME
//** suffix   - FAF/API tableset suffix (00 through 07)
//**

## AIStABLS

This member will define the tablespace, create the table and index for the AIS+ EE Version 1.0 tables, (Application Profile Table, Collection Name Table, Document Profile Table, Delete Log Table, Delete Reason Code Table, Delete Folder Tab Table, Folder Profile Table, Operator Group Assignement Table, Group Profile Table, Messages Table, Operator Profile Table, Recovery Table, Operator Monthly Statistics Table, Folder Tabs Table, CICS Transaction Table).

```
//AIStABLS JOB (ACCOUNT), 'CREATE ALL AIS+ TBLS',MSGCLASS=X,CLASS=A,
//                  MSGLEVEL=(1,1),NOTIFY=&SYSUID
//ROUTE PRINT LOCAL
//*
//***** AIStABLS *****
//*
//* SAMPLE JOB STREAM TO CREATE ALL AIS+:
//*   o Tablespace
//*   o Tables
//*   o Indices
//*
//***** ATTN!!!
//* - Adjust space parameters before running this job.
//* - Change tablespace names to meet intallation convention
//*   (note! this job uses 'AISTSxx' convention,
//*     where 'xx' = an arbitrary descriptive name)
//* - Change bufferpool as applicable (BP0 used for all tablespaces)
//* refer to the AIS+ system administration manual for assistance
//*
//* CUSTOMIZE THE FOLLOWING FIELDS:
//*   DB2LOAD - HIGH LEVEL QUALIFIER OF DB2 SYSTEM LIBRARY
//*   DB2SYS - DB2 SUBSYSTEM
//*   DB2PLAN - DB2 PLAN NAME
//*   DB2RUN - HIGH LEVEL QUALIFIER OF DB2 RUNTIME LIBRARY
//*   CREATOR - ID OF CREATOR DEFINING THE TABLE
//*   AISDB - DATABASE NAME
//*   AISGRPDT - TABLESPACE STORAGE GROUP NAME
//*   AISGRPIX - INDEX STORAGE GROUP NAME
//*
//***** AIS+ tables created by this job *****
//*
//*   AISAPPL - APPLICATION PROFILE
//*   AISCOLL - COLLECTION NAME
//*   AISDCMT - DOCUMENT/FORM PROFILE
//*   AISDLOG - Delete log
//*   AISDRSN - Delet codes
//*   AISDTAB - TAB descriptions
//*   AISFLDR - FOLDER PROFILE
//*   AISGOPR - GROUP OPERATOR PROFILE
//*   AISGRUP - AIS GROUP PROFILE
//*   AISMSGS - AIS MESSAGES
//*   AISOPPF - OPERATOR PROFILE
//*   AISRCOV - Recovery
//*   AISSTAT - Operator statistics
//*   AISTABS - Folder Tabs
//*   AISTRAN - Transaction mapping
```

```

## DB2 Upgrade Jobs

Use the following sets of JCL to upgrade AIS+ Version 3.0 to AIS+ EE Version 1.0. The JCL is provided in data set AISEE10.INSTLIB.

### AIS3UCSD

This member loads all PPT and PCT entries into your CSD.

```

//AISLDCSD JOB (AIS),'LOAD AIS CSD',
//           CLASS=A,
//           MSGCLASS=X,
//           MSGLEVEL=(1,1),
//           NOTIFY=&SYSUID
//           TYPRUN=SCAN
///*
//***** Load PPT / PCT - Definitions into the CICS CSD file.
///*
//** Change following symbolic using an editor:
///*
//**   o CICSLOAD --> High Level Qualifier for your CICS Load lib
//**             (i.e. where DFHCSDUP is located)
//**   o CICSCSD --> High Level Qualifier for your CICS CSD lib
//**   o AISQUAL --> High Level Qualifier for AIS data file
//**             containing CSD member
///*
//*****
//*
//AISLDCSD EXEC PGM=DFHCSDUP,REGION=1024K,
//           PARM='CSD(READWRITE),PAGESIZE(60),NOCOMPAT'
//*
//STEPLIB    DD DSN=&CICSLOAD.SDFHLOAD,
//           DISP=SHR
//SYSPRINT   DD SYSOUT=*
//SYSABOUT   DD SYSOUT=*

## Appendix B: Database Information

All AIS+ information is maintained in a series of IBM DB2 tables. Each table resides in its own tablespace and, in turn, all tablespaces reside under one database.

There are seventeen (17) AIS+ tables and five (5) views of FAF/API tables used by AIS+ EE software that aid in configuring and administering information utilized by the applications running within AIS+. These tables and views are in addition to the IBM FAF, IBM IODM, and IBM OAM DB2 tables used by the respective products. AIS+ supports the tablesets for the following IBM FAF tables: EYPTOBJT, EYPTFOLD, EYPTSNDX, EYPTNOTE, EYPTVERS, EYPTEVNT, and EYPTONAM. Please refer to the appropriate IBM product manual for further information relative to the IBM DB2 tables.

Description	Table Name
Profile for each application used within AIS+	AISAPPL
Collection name assignment per form used by application	AISCOLL
Profile for each form used by application	AISDCMT
Log maintained for document and folder deletions	AISDLOG
Delete reason codes used when deleting a document or folder	AISDRSN
Default tab within a folder used by document when initially entering application	AISDTAB
Profile for each folder used by application	AISFLDR
Operator group assignments	AISGOPR
Form Group Table	AISGRUP
All messages used within application	AISMSGS
Operator queue assignments	AISOPAS view of EYPTWEAS
Profile for each operator using an application	AISOPPF
Host print detail of each object requested for print	AISPRTDT
Host print status for each request made by an operator	AISPRTRQ
Error recovery/restart table	AISRCOV
Routing-line-of-business/transaction type routing information	AISRLTT view of EYPTWRTT
Operator monthly statistics	AISSTATS
Tabs associated for a folder type	AISTABS
CICS transactions for AIS+	AISTRAN
Units used in routing	AISUNIT view of EYPTWUNT
Unit/Route Code combinations used in routing	AISUNRC view of EYPTWURC
Work detail table	AISWORK view of EYPTWDET

## DB2 Space Requirements

The space requirements for AIS+ are relatively small compared to the enormous space necessary to maintain the IBM FAF DB2 tables. This section is intended only to give a snapshot of a default base implementation. If your shop has requirements that differ from the assumptions, then you will need to adjust the sizes and free space utilization accordingly. But, for the most part, your application should easily fit within the guidelines provided. For detailed instructions on space calculations, see the [AIS+ System Administration Manual](#), Appendix C.

### Data Tablespace:

Table	Length	Rows/ Page	% Fre e	Free Page	PRIQTY (PAGES)	SEC QTY	Contents Within Primary Quantity
AISAPPL	266	15	0	0	12 (3)	0	15 Application Profiles
AISCOLL	90	45	0	0	12 (3)	00	45 Collection/Form Combinations (Only used when a form has a specific collection name associated with it)
AISDCMT	146	28	0	0	12 (3)	0	28 Document Profiles (One profile per document type used)
AISDLOG	207	28 (22)	20	0	168 (42)	0	880 Entries
AISDRSN	29	127	0	0	12 (3)	0	127 Reasons (Only 54 needed per application)
AISDTAB	46	88	0	0	12 (3)	0	88 Document/Folder Tab Default Combinations (A document can only have one default tab)
AISFLDR	259	15	0	0	12 (3)	0	15 Folder Profiles (One profile per folder type used)
AISGOPR	20	114	10	10	20	0	114 Operator Group Assignments.
AISGRUP	20	114	10	10	12	0	455 Group Profiles.
AISMSGS	88	46	0	0	48 (12)	0	460 Messages (400 AIS+ & 60 User)
AISOPAS	31	127(101)	20	0	12 (3)	0	127 Operator Assignments
AISOPPF	109	42 (33)	20	0	48 (12)	0	330 Operator Profiles
AISPRTDT	179	23 (20)	10	10	2208 (552)	1104	10,000 Host Print Detail Entries
AISPRTRQ	271	15 (13)	10	0	620 (155)	310	2,000 Host Print Requests
AISRCOV	4055	1	0	0	48 (12)	0	10 Entries
AISRLTT	88	45	0	0	12 (3)	0	45 RLOB/Transaction Type Combinations
AISSTATS	100	36	10	0	5508	1127	50,000 entries for each operator activity in a particular month.

## Appendix C: New Install Checklist (AIS+ EE Version 1.0)

---

1. Preparation/Setup
  - a. Review Getting Started Manual and installation job requirements.
  - b. Gather pertinent information and system access in order to run installation jobs (Data set names, DB2 info, CICS info, etc...).
2. Unload Software from the Tape
  - a. Create JCL to extract the first file, containing sample JCL to unload the remaining software from the AIS+ EE installation tape. See section “Unload Software from the Tape” for details.
  - b. Modify and run the sample JCL to unload the remaining software from the AIS+ EE installation tape.
3. Perform DB2 Administration
  - a. Edit and submit AISSTGRP to create AIS+ EE Storage Groups, and Database
  - b. Edit and submit AISTABLS to create all AIS+ EE Tables, Tables, and Indices
  - c. Edit and submit AISHPRNT to create AIS+ EE Host Print Tables, Tables, and Indices
  - d. Edit and submit AISALDET to alter the FAF/API work detail table (EYPTWDET)
  - e. Edit and submit AISFAFIX to define additional indices on FAF/API tables
  - f. Edit and submit AISVIEWS to create AIS+ EE views on FAF/API Tables
  - g. Edit and submit AISSYNO1 to create synonyms used by AIS+ EE
  - h. Edit and submit AISIMSGS to insert AIS+ EE messages into the appropriate tables
  - i. Edit and submit AISIDRSN to insert document delete codes/messages for an application
  - j. Edit and submit AISITRAN to translate AIS+ EE CICS Transaction ID codes to your site standards
4. Perform CICS Administration
  - a. Edit and submit JCL member “AISLDCSD” to update your CSD with PPT and PCT entries.
  - b. Update RCT table with install member “AISRCT”;
  - c. Update CICS startup deck with AIS+ EE Load Library.
5. Perform AIS+ Software Installation
  - a. Edit and submit LINKMAP to link edit all maps in the system;
  - b. Edit and submit LINKBTCH to link edit all batch programs in the system;
  - c. Edit and submit LINKCICS to link edit all online programs in the system;

- d. Edit and submit PACKAUTH to adhere to site standards. Run using DB2 Interactive SPUFI;
  - e. Edit and submit BINDCICS to bind all AIS+ EE online packages and plans;
  - f. Edit and submit BINDBTCH to bind all AIS+ EE batch packages and plans;
  - g. Edit and submit AISGRANT to grant access to the AIS+ EE plans
6. Update the appropriate IBM FAF and IBM IODM system tables as outlined in their respective product manuals in establishing a new front-end application.
  7. Perform AIS+ Install Verification. See section “Install Verification” for details.

## Appendix D: Upgrade Checklist

---

**NOTE: This checklist ONLY applies to upgrades from AIS+ V3.0, running with ImagePlus Version 3.1 or higher, to AIS+ EE Version 1.0. If your environment is running with a version of ImagePlus prior to Version 3.1 you will need to upgrade to ImagePlus Version 3.1 or higher, (Please reference IBM's ImagePlus Version 3.1 manuals for further details).**

1. Preparation/Setup
  - a. Review Getting Started Manual and installation job requirements;
  - b. Gather pertinent information and system access in order to run installation jobs (Data set names, DB2 info, CICS info, etc...).
2. Unload Software from the Tape
  - a. Create JCL to extract the first file from the AIS+ EE Version 1.0 installation tape, (see section “Unload Software from the Tape” for details). This first file contains sample JCL to unload the remaining software from the installation tape;
  - b. Modify and run the sample JCL to unload the remaining software from the AIS+ EE installation tape.
3. Perform DB2 Administration
  - a. Edit and Submit AIS3UPDT to upgrade AIS+ Version 3.0 tables to AIS+ EE Version 1.0 tables; affects tables “AISAPPL”, “AISOPAS” (a view of FAF/API table “EYPTWEAS”), and “AISOPPF”;
  - b. Edit and Submit AIS3UMSG to upgrade AIS+ Version 3.0 message table to AIS+ EE Version 1.0 message table; affects table “AISMSG5”;
  - c. Edit and Submit AIS3UHPR to upgrade AIS+ Version 3.0 host print tables to AIS+ EE Version 1.0 host print tables; affects tables “AISPRTTRQ”, and “AISPRTDT”.
4. Perform CICS Administration
  - a. Edit and submit JCL member “AIS3UCSD” to update your CSD;
  - b. Update RCT table with install member “AIS3URCT”.
5. Perform AIS+ Software Installation
  - a. Edit and submit LINKMAP to link edit all maps in the system;
    - Modify source BMS maps to meet your site requirements(if any)
    - Edit and submit AISMAP for each panel you have modified
  - b. Edit and submit LINKBTCH to link edit all batch programs in the system;
    - Modify source batch reports to meet your site requirements(if any)
    - Edit and submit AISBATCH for each batch program you have modified
  - c. Edit and submit LINKCICS to link edit all online programs in the system;
    - Modify source Customer Exits to meet your site requirements(if any)
    - Edit and submit AISCICS for each user exit you have modified. At a minimum you will need to recompile Customer Data Exit program/s (i.e. AIEX001\*), as a copybook was modified for this program/s.
  - d. Edit and submit BINDCICS to bind all AIS+ EE online packages and plans;

- e. Edit and submit BINDBTCH to bind all AIS+ EE batch packages and plans;
  - f. Edit and submit AIS3UGRT to grant access to new AIS+ EE Version 1.0 plan/s; affects plan “AINT005P”.
6. Perform AIS+ Install Verification. See section “Install Verification” for details.

## Appendix E: Host Print

---

### Installation

Earlier steps in the installation process loaded source, JCL, copy and parm members into their respective libraries. In addition to loading these members, other steps need to be executed for AIS+ HostPrint to function properly. The AIS+ HostPrint execution job uses Generation Data Groups (GDGs) for its output. Therefore, a GDG Base Entry must be created. The JCL stream, as outlined below, exists in the supplied member **BUILDGDG**.

```
//job card (fill company's standard jobcard)
// BUILDGDG EXEC PGM=IDCAMS
//SYSPRINT DD SYSOUT=*
//SYSIN DD *
DEFINE GDG -
  (NAME(hiqual.S.HP01.printrid.PRTB)-
  LIMIT(2) -
  NOEMPTY -
  SCRATCH)
/*
//
```

The **BUILDGDG** member must be modified specific to your site. In the above example, the words that are highlighted and in lower-case need to be altered. When modifying the printrid, please make sure that it does not exceed eight (8) characters. This printer ID should be the same name as the destination where the images will be printed. Also, note that this job will need to be executed for each of the printer IDs intended for use. In the event that a new printer ID is added at a later time, simply execute this job with the appropriate Id to properly define the printer.

Prior to AIS+ HostPrint execution, another member must be customized. This member, **BASEJCL**, contains the skeleton JCL that is used by the **BUILDJCL** program. That program builds an output JCL stream which will process print requests for each of the printer IDs and then route the print to the appropriate printer. Below is the actual JCL as installed. Please modify the JCL as suggested in the text following the job stream.

```
F//JOBCARD (FILL IN COMPANY'S VALUES)
F// (FILL IN COMPANY'S VALUES)
F//JOBLIB DD DSN=HIQUAL.LOADLIB,DISP=SHR
F// DD DSN=HIQUAL.DSNLOAD,DISP=SHR
F// DD DSN=HIQUAL.COB2LIB,DISP=SHR
//AISHPALL PROC

/*
*/

```

In the above model, please note that some of the lines begin with a letter and that the other lines are indented one space. This is incorrect JCL. However, remember that this is just a model from which the real JCL will be built dynamically. Please do not remove these letters nor adjust any spacing. Throughout this listing, several library names are highlighted. Please change these libraries to the comparably named libraries at your site.

The first three lines are prefixed with an `F'. These lines need to be modified with your company's jobcard. It is pertinent that each line of your jobcard be prefixed by an `F'.

The next modification involves the space parameter on the IOCAOUTB dd. The highlighted portion of the space parameter might need to be modified based upon the anticipated volume of print. The Space equation in FIGURE 1 can help you with these estimates.

### Space Equation for Printed Image Files

Average Space Required for an 8-1/2" x 11" image , and all related header and trailer pages, is 60 k.

The standard equation is as follows: SPACE = (8209,(n1,n2),RLSE)

Take the appropriate number of image pages that will be printed in your largest run and use it in the below calculations to derive the amount of space needed.

Multiply that number by 60,000. This will give the total amount of space necessary. Divide that amount by 8,209 to get the number of blocks necessary.

The resulting value must then be broken up into units of n1 and n2. It is advisable to over

estimate since the RLSE parameter is being utilized.

The value in n1 represents the amount of primary space that you are requesting.

These quantities are supplied according to exactly what you request. The value in n2 represents the amount of secondary space that you are requesting. This space is allotted on an “as needed” basis. The value in n2 is supplied in up to 15 extents. The chart below gives some examples of possible space scenarios.

<b>Image Pages</b>	<b>Space Needed</b>	<b>Possible Equations</b>
100	6,000,000	SPACE=(8209,(355,25),RLSE)
500	30,000,000	SPACE=(8209,(654,200),RLSE)
1000	60,000,000	SPACE=(8209,(1300,400),RLSE)
2500	150,000,000	SPACE=(8209,(3288,999),RLSE)

*Figure 1 – Space Equation for Printed Image Files*

The value in the FORMDEF represents a Form Definition that was created specifically for this package. This Formdef, entitled "IMAGE", provides the ability to print the banner pages from one paper bin and the images from a different bin within the same printer. This allows the customer to print banner pages on a different color paper to further aid in distributing the printed output more easily. This Form Definition needs to be compiled into the system form definition library. The JCL to compile this member was supplied with your Print Services Facility software. Please refer to the Print Services Facility documentation for more information about Form Definitions. The supplied member IMAGE contains the JCL and the actual source to be compiled. Before executing this member, please be certain to modify the jobcard and the location of any other noted system files.

Another aspect of the print portion is the SYSOUT value on the SYSUT2 dd statement. This value will need to be set at installation time. Notice that "DEST" on line 'D' will be filled in automatically to match the printer Id that is being processed. Please be certain that the destination names at your site match your printer Ids.

The lines prefixed by `P' and `C' should not be altered. Values will be inserted into these lines based upon the printer currently being processed.

The final line, prefixed with an 'S'; contains several input parameters that your company can modify to tailor this application. The spacing on this final line is important and **should not** be altered. Only the values within the slashes should be modified. The value IMAGE can be modified. This value will appear on the header and trailer pages in an expanded form. The next value, SYSCOM, INC. AIS+ PRINT JOB, can also be modified and also appears on the header and trailer pages. The last two fields are both required, however, they may be modified. The first field, DB2I, is the subsystem-Id where the images reside. This value can be obtained from those installing the AIS+ application.

The final parameter, currently set at 020, is required. It is used to prevent the printing of images that do not reside on DASD, resulting in a shorter print cycle. The value represents the number of minutes that are allotted for an object to be pre-fetched to DASD. Each time that a print request is entered via AIS+, a determination is made as to whether the object is stored on DASD. In the event that it is not, a Prefetch request is submitted to move the object to DASD. When the print job is submitted, it subtracts this value from the current time to limit which print requests are processed. For example, if the parameter is set to 020 and the job is submitted at 8:00am, any print requests that were entered up to and including 7:40am on that day will be processed. Any requests that were entered between 7:40:01 and 8:00am will not be processed since they may still be in the Prefetch stage. This parameter must have a value between 000 and 999. When considering the value to use, perhaps overestimate to make certain only retrieves from DASD occur.

Before executing AIS+ HostPrint, one final JCL stream, **AISHPJCL**, must be customized. This job requires changes to the job card and system libraries. In addition, the SYSUT2 DDname may need a modification to properly submit the JCL to your internal reader. Finally, the file in the PRINTFIL DDname must be created. This file is the printers file and contains the printer Ids that you want to execute. Place as many entries as you desire in this file. These printer values should be the same name as the printer Id created in the **BUILDGDG** step. Each value takes up to eight spaces, allowing ten Ids to fit on each line. If you want to run the program for all printer Ids, place a blank line at the top of this file. Once all of the above modifications are completed, the AIS+ HostPrint application is ready for execution.

## EXECUTION

To begin processing, submit the member **AISHPJCL**. In turn, a program called **BUILDJCL** will be executed. This program will take an input file called **&HIQUAL..HP01.PRINTERS** and create a jobstream based on its values.

The output from **BUILDJCL** is called **JCLSTREM**. **JCLSTREM** contains an instream proc for each unique printer Id that is being processed. Each of the procs will run the **AISHP001** program which processes the print requests and builds an output dataset, **&HIQUAL..S.HP01.prinrid.PRTB (+1)**, containing an AFP print stream. This dataset will then be printed on the corresponding printer, assuming everything works successfully. The print requests are entered in the AIS+ Host Print function. Refer to the section Host Print of AIS+ in the User Reference Manual for more information.

## RESTART/RECOVERY

Program execution, in an effort to reduce deadlocks, performs database commits after each object retrieval and each print request. As such, should an abend occur, any processing that has taken place has already been committed successfully. The request that abended will be set back to an unprocessed status when the database rollback occurs. In summary, should an abend occur, fix the problem and then simply resubmit the job again.

**Supplied Members:****SOURCE:**

<b>AISHP001</b>	This is the AIS+ Host Print Driver Program. It is written using COBOL II, DB2 and OSREQ.
<b>AISHP002</b>	This is a program called by AISHP001. It performs the following OSREQ functions: access, changed, delete, query, retrieve, store, unaccess. It is written in assembler.
<b>AISHP003</b>	This is a program called by AISHP001. It obtains addresses used to store 32K sections of image information. It is written in assembler.
<b>AISHP004</b>	This is a program called by AISHP001. It converts the binary values returned from OSREQ to hexadecimal strings. It is written in assembler.
<b>AISHP005</b>	This is a program used to pull the Return Code from the AISPHP001 execution back into the JCL stream. This is necessary because when executing a program using ISPSTART you are not able to alter the Return Code. This code is used to determine whether or not to perform the actual printing of the file. This program is written using COBOL II only.
<b>AISHP006</b>	This program will populate the AIS+ Host Print tables with requests from an external file containing all relevant indexing and routing information.
<b>AISHP007</b>	This program produces a report on the processing status of requests made for a given AIS+ Host Print run.
<b>BUILDJCL</b>	This program generates the JCL needed to process AISHP001 using the input printer ID file.

**COPY/OTHER:**

<b>AISBANRW</b>	This is a copybook used by AISHP001 when preparing header and trailer pages.
<b>AISBANRP</b>	This is a copybook that contains source used by AISHP001 to prepare header and trailer pages.
<b>AISHPABP</b>	This is a source module that is called by both AISHP001 and BUILDJCL to perform abend routines.
<b>TIFF2MCA</b>	This assembler module is called by AISHP001 to convert TIFF images to MO:DCA images.
<b>TIFF2MCA</b>	This is a copybook used as the interface between AISHP001 and the TIFF2MCA subroutine.
<b>IMGIPARM</b>	This source module is called by AISHP006 to read parameters from an input file.
<b>IMGCIPRM</b>	This copybook is used as the interface between AISHP006 and the IMGIPARM routine.
<b>AISHPABW</b>	This is a copybook used by both AISHP001 and BUILDJCL when executing abend routines.
<b>BASEJCL</b>	This contains the Skeleton JCL used as input to the BUILDJCL program. This data needs to be copied into the file described under the DDname <b>PLAINJCL</b> in the member AISHPJCL.

<b>IMAGE</b>	This is the form definition used by Print Services Facility (PSF) to define which physical forms are used for printing each logical page. This member needs to be compiled using an AFP compiler which creates a resource in your system Form Definition library. This resource is used when printing the images.
<b>PRINTERS</b>	This member is not supplied. It will need to be created to match the Ddname PRINTFIL in the member AISHPJCL. This file will contain the printer IDs that are to be processed by AISHP001.
<b>STRFLDS</b>	This is a copybook used by AISHP001 to convert images into an AFP data stream using structured fields.

**PARM:**

<b>AISHP001</b>	This is the parm member necessary to bind the program AISHP001.
<b>BUILDJCL</b>	This is the parm member necessary to bind the program BUILDJCL.
<b>IOCAPRTA</b>	This contains the input AFP Parameter values. These values are used as input to the AISHP001 program.

**JCL:**

<b>AISHPJCL</b>	This is the JCL member that will execute the JCL Generation program, BUILDJCL.
<b>BUILDGDG</b>	This is the JCL member necessary to create the Generation Data Groups (GDG's) needed for the AIS+ Host Print process.
