# Butterfly™
Feel the Effect...

SYSCOM INC

SYSCOM is proud to announce the latest generation Application Development Framework that unites electronic content management and line of business applications with business process automation.

Control Frame
Includes built-in extras and fully configurable components.

Document Frame
Images, documents, and media, with the full use of CM tools (zoom, annotate, etc.)

Application Frame
Full WebSphere suite, along with pre-built SYSCOM functions, and LOB applications.

Improve Productivity

End-Users

All casework is processed from a single, consolidated dashboard that drives 50% greater throughput. No more switching applications or inefficient searches for the right documents. Keeps caseworkers focused and effective.

IT Staff

Minimize end-user training time and expense with an intuitive, browser-based application that is a breeze to deliver and support on the platform of your choice.

Developers

Leverage out-of-the box presentation and integration components to deliver better applications in less time. Enforce standards and best practices from the top down, across the development team. Stay flexible and position for the future with a flexible application development platform that leverages emerging technologies.

Highlights

- **Integrates Workflow, Content, and custom functionality into a single, easy-to-use interface.**

- **Provides pre-written, reusable code-base, drastically reducing costs and development times for new integrated applications.**

- **Takes advantage of SYSCOM's experience with complex projects, enforcing Workflow and Image "best practices".**

- **Keeps one eye on the future: developed to embrace emerging technologies.**

Improve Your Bottom Line

Time is money. Period. The time saved and efficiencies gained across your organization will save precious capital while enhancing customer service and shortening processing times, whatever your business.

If "a penny saved is a penny earned," Butterfly™ could be the biggest single earner in your organization.

Make a Rapid Change

Install and go with a framework that is functional "out-of-the-box." The combination of pre-built integration and presentation components with industry templates lets developers keep pace with the rapid evolution of case processing requirements in the insurance, financial services, service bureau and government sectors.
